

式の四則混合

問題

名前：_____

1 $((6x + 8) + (-6x - 30)) \times -3 \div 2 - (8x + 5) = \square$

11 $((-11x - 10) + (-x - 2)) \times 2 \div 4 - (-5x - 2) = \square$

2 $((-8x - 15) + (28x + 60)) \times -4 \div 5 - (-2x) = \square$

12 $((-8x + 12) + (4x + 36)) \times 3 \div 4 - (6x + 10) = \square$

3 $((-7x - 12) + (-9x + 48)) \times 5 \div 4 - (4x - 8) = \square$

13 $((5x - 3) + (7x - 1)) \times -6 \div 4 - (2x - 10) = \square$

4 $((4x - 5) + (26x - 37)) \times 3 \div 6 - (4x - 12) = \square$

14 $((-12x + 13) + (12x - 25)) \times 2 \div 6 - (3x + 3) = \square$

5 $((10x - 14) + (-6x + 34)) \times -5 \div 4 - (-8x + 12) = \square$

15 $((4x - 1) + (-4x - 49)) \times 5 \div 5 - (7x - 2) = \square$

6 $((-10x - 12) + (16x + 18)) \times -3 \div 3 - (4x + 5) = \square$

16 $((-3x - 8) + (-5x + 40)) \times 2 \div 4 - (x - 4) = \square$

7 $((4x - 3) + (5x - 9)) \times -3 \div 3 - (3x + 2) = \square$

17 $((-10x + 12) + (14x - 2)) \times -5 \div 2 - (-2x - 8) = \square$

8 $((2x + 9) + (-2x + 41)) \times -3 \div 5 - (3x + 12) = \square$

18 $((5x - 9) + (-21x - 7)) \times 6 \div 4 - (3x + 2) = \square$

9 $((-12x + 5) + (3x - 14)) \times 2 \div 3 - (-6x + 6) = \square$

19 $((-11x - 2) + (21x + 7)) \times 6 \div 5 - (-x + 5) = \square$

10 $((12x + 12) + (-3x - 33)) \times -5 \div 3 - (5x + 5) = \square$

20 $((-9x + 8) + (-19x + 24)) \times -2 \div 4 - (-x - 10) = \square$

式の四則混合

解答

名前： _____

1 $((6x + 8) + (-6x - 30)) \times -3 \div 2 - (8x + 5) = \square$

答え： $-8x + 28$

2 $((-8x - 15) + (28x + 60)) \times -4 \div 5 - (-2x) = \square$

答え： $-14x - 36$

3 $((-7x - 12) + (-9x + 48)) \times 5 \div 4 - (4x - 8) = \square$

答え： $-24x + 53$

4 $((4x - 5) + (26x - 37)) \times 3 \div 6 - (4x - 12) = \square$

答え： $11x - 9$

5 $((10x - 14) + (-6x + 34)) \times -5 \div 4 - (-8x + 12) = \square$

答え： $3x - 37$

6 $((-10x - 12) + (16x + 18)) \times -3 \div 3 - (4x + 5) = \square$

答え： $-10x - 11$

7 $((4x - 3) + (5x - 9)) \times -3 \div 3 - (3x + 2) = \square$

答え： $-12x + 10$

8 $((2x + 9) + (-2x + 41)) \times -3 \div 5 - (3x + 12) = \square$

答え： $-3x - 42$

9 $((-12x + 5) + (3x - 14)) \times 2 \div 3 - (-6x + 6) = \square$

答え： -12

10 $((12x + 12) + (-3x - 33)) \times -5 \div 3 - (5x + 5) = \square$

答え： $-20x + 30$

11 $((-11x - 10) + (-x - 2)) \times 2 \div 4 - (-5x - 2) = \square$

答え： $-x - 4$

12 $((-8x + 12) + (4x + 36)) \times 3 \div 4 - (6x + 10) = \square$

答え： $-9x + 26$

13 $((5x - 3) + (7x - 1)) \times -6 \div 4 - (2x - 10) = \square$

答え： $-20x + 16$

14 $((-12x + 13) + (12x - 25)) \times 2 \div 6 - (3x + 3) = \square$

答え： $-3x - 7$

15 $((4x - 1) + (-4x - 49)) \times 5 \div 5 - (7x - 2) = \square$

答え： $-7x - 48$

16 $((-3x - 8) + (-5x + 40)) \times 2 \div 4 - (x - 4) = \square$

答え： $-5x + 20$

17 $((-10x + 12) + (14x - 2)) \times -5 \div 2 - (-2x - 8) = \square$

答え： $-8x - 17$

18 $((5x - 9) + (-21x - 7)) \times 6 \div 4 - (3x + 2) = \square$

答え： $-27x - 26$

19 $((-11x - 2) + (21x + 7)) \times 6 \div 5 - (-x + 5) = \square$

答え： $13x + 1$

20 $((-9x + 8) + (-19x + 24)) \times -2 \div 4 - (-x - 10) = \square$

答え： $15x - 6$
